

# Emerging Directions in Deep Learning

## Lab 2 - *Geomstats* - Applications

Mihai-Sorin Stupariu

The aim of the lab is to further practice the [Geomstats](#) package, see also [the GitHub repository](#). The reference paper is [Miolane et al., 2020](#), see also [this paper](#). The tasks of the lab can be found below. The documentation is a single PDF file including screenshots of the solutions and brief explanations where required. The file will be sent on the individual chat of MSTEams until **Thursday, 19.03.2026, 12:00**.

**Warning:** Some code examples may require an older version of *Geomstats* (e.g. v. 2.4.2).

1. **(4p)** Choose one of the [Geomstats tutorials](#) except from the first five. Run the notebook associated to the chosen tutorial. Provide a brief explanation on the tutorial's topic.
2. **(max. 4p)** Make changes (at a conceptual level) to this tutorial and report the outcomes. Explain the changes in the documentation.
3. **(6p)** Presentation of the solution in the lab session.
